

EMPLOYMENT

Biztech Engineer **Modeverse** **Jan 2026 – Present**

Key Responsibilities:

- Manage multiple client Salesforce environments spanning Service Cloud, Sales Cloud, and Litify, alongside GoHighLevel (GHL), acting as solution architect to assess client needs and design fitting solutions.
- Lead a two-person team and serve as the key technical point of contact for client accounts including BTU, Amtech, APCG, and Entrpux, managing workflows, leading discovery meetings, and handling communications.
- Build custom business logic in Apex, custom forms with Visualforce pages, and dynamic forms using Screen Flows and Experience Cloud sites, and deliver reporting and dashboards.

Marketing Automation Specialist **Mountainise, Inc.** **Feb 2022 – Dec 2025**

Mountainise builds bespoke MarTech and automation solutions: data integration, CRM management, and innovative tech-stack solutions.

Key Responsibilities:

- Built recipes, datasets, and reports in Salesforce Analytics Studio and surfaced them in Analytics dashboards.
- Designed emails using HTML, CSS, and email builder tools, and executed email marketing campaigns.
- Created and managed automation rules and Salesforce flows.
- Used Engagement Studio and advanced email automation strategies for customer journey mapping and streamlined marketing efforts.
- Managed campaign statuses, leads, and Zoom webinars.
- Configured page layouts, fields, and objects for efficient data management.

Marketing Executive **Lucrative.ai** **Mar 2021 – Feb 2022**

Key Responsibilities:

- Built and managed backlink and guest-posting strategies for Ailaaj, Resourcing 360, Mountainise, CraftStonesCreations, and Lucrative.ai, and wrote SEO-friendly content that improved search rankings and organic traffic.
- Built the Resourcing360 website from scratch, handling page content, blog writing, and on-page and off-page SEO, including meta optimization for medicines on Ailaaj.com.

PROJECTS

- **Litify Med Management (Salesforce):** Built a custom Med Management solution on Litify to track and manage cases through multiple lifecycle stages.
- **PI Case Status Routing:** Designed a complex Personal Injury (PI) case status-routing flow spanning multiple objects — Matter, Resolution, Expert, and Med Management — to automate stage transitions and status tracking.
- **Custom FSA Engine (Service Cloud):** Engineered a custom FSA engine end to end — created a custom FSA object with record-type-specific events; built dynamic intake forms with Visualforce pages; created static resources for canvas rendering and PDF conversion; wrote an Apex controller to auto-populate, save, and attach the generated PDF to the FSA record; integrated a custom signature pad; and automated event creation with a technician approval process.
- **Pardot-Zoom-Salesforce Integration:** Integrated Pardot with Zoom Webinar and connected them to Salesforce campaigns, implementing automation rules to synchronize participant statuses from Pardot lists to the corresponding Salesforce campaign for seamless data flow and accurate status tracking.
- **Pardot Custom Fields:** Created custom fields in Pardot mapped to Salesforce fields and populated based on specific recipient activities within Pardot emails.
- **Analytics Studio Recipes:** Built recipes in Analytics Studio for VPs' call data used in Analytics reports and dashboards, resolving client time-zone alignment against the Analytics Studio time zone via the recipe.
- **Lifecycle Stage Flow:** Designed a Salesforce flow to update lead/contact lifecycle stage dates in custom fields and used it in Salesforce reporting to display the full lifecycle journey.
- **GHL-Salesforce Integration:** Integrated GoHighLevel with Salesforce via Zapier to flow opportunities from GHL to Salesforce based on contact activity.
- **Forward-to-a-Friend Automation:** Developed a "Forward to a Friend" button that automatically forwards the email to the intended recipient seamlessly on click.
